Re: ILAB’s List of Goods Produced by Forced Labor and Seafood Exemptions

Dear Ms. Marcia Eugenio:

We are writing to express our deep concern over the Bureau of International Labor Affairs’ (ILAB) practice of only including seafood harvested from a country’s territorial waters or Exclusive Economic Zone in your List of Goods Produced by Child Labor or Forced Labor (“List of Goods”). This practice effectively excludes distant water fishing nations with significant incidence of forced labor on the high seas from your biennial report to Congress and the public. We call on you to fully consider the ramifications of this position on forced labor in the fisheries sector, declare an official policy of attributing high seas catch to the flag State, and remove all seafood exemptions in the 2020 report.

ILAB’s List of Goods is widely recognized as one of the most important sources of information on the current state of forced labor in numerous sectors around the world. Seafood buyers and suppliers rely on your findings when conducting human rights due diligence, consumers look to your Sweat & Toil app for the latest updates on forced labor risks in their seafood, foreign governments shape their policies and actions in response to your listings and subsequent dialogue, and civil society organizations use your report as a powerful tool for advocacy. Even the Marine Stewardship Council, an environmental certification organization, selected your report as one of its four indicators to determine whether a country is “lower risk” and thus exempt from labor audits under its new forced labor policy.

It is clear that the List of Goods has made a significant contribution to reducing forced labor across many sectors and that is why it is vital ILAB take the unequivocal position that all seafood caught on the high seas is eligible for listing in your report. Some communications with your staff suggest high seas catch will continue to be exempted regardless of whether all five factors that constitute your “reason to believe” standard are fulfilled, including sufficient evidence that demonstrates significant incidence of forced labor on Taiwanese and other foreign-flagged fishing vessels harvesting tuna and other species in international waters.
ILAB’s practice of considering high seas catch as attributable to no single country is confounding as it is inconsistent with international law, including several provisions of the UN Convention on the Law of the Sea – which the US has agreed reflects customary international law – and the UN Fish Stocks Agreement to which the US is a party. This practice also undermines US and international efforts to combat forced labor and human trafficking on fishing vessels operating in international waters as well as the co-occurring crime of illegal fishing. Moreover, it also conflicts with the current policy and practice of the US Department of State and the National Oceanic and Atmospheric Administration, two US agencies that represent US interests at the UN and select regional fisheries management organizations (RFMOs).

Indeed, at the most recent meeting of the International Commission for the Conservation of Atlantic Tunas (ICCAT), the US made an opening statement that highlighted its concern about the overfishing of bigeye tuna and called on fellow members of ICCAT to help establish conservation and management measures (CMMs) that would end the overfishing of this species immediately and rebuild the stock as soon as possible. The US has proposed, supported, and complied with the CMMs of ICCAT and other RFMOs that demonstrate high seas catch is attributed to the flag State, including species-specific catch prohibitions for certain flag States operating within the area of the ocean covered by the RFMO convention; annual catch limits/quotas, including species and gear-specific limits, for members of the RFMOs; and catch documentation and reporting requirements for members of the RFMOs to ensure compliance with these CMMs.

ILAB’s seafood exemptions has resulted in a dangerously incomplete picture of forced labor in the global fishing industry. While several countries have been listed in your report for forced labor produced seafood, some of the worst offenders are conspicuously missing. Numerous media and civil society reports over the years have shown that the most egregious human rights abuses, including forced labor, human trafficking, and even murder, occur in international waters where longline fishing vessels targeting tuna are far from sight and perpetrators often evade accountability for their crimes.

Seabound: The Journey to Modern Slavery on the High Seas, a new Greenpeace report released last week, provides further evidence that forced labor on Taiwanese longline fishing vessels continues unabated with little to no consequences for those who deceive and abuse Indonesian migrant fishers. The testimonies of six survivors of horrific abuses are indicative of the labor conditions in the Taiwanese tuna industry as a whole. Credible media and NGO reports have documented similar incidences on numerous Taiwanese longline fishing vessels over the last five years, yet ILAB has chosen to exempt Taiwanese caught tuna from its report for unjustified reasons. These are not isolated cases and the abuses will continue until the US uses the full range of tools at its disposal, including the List of Goods, to send a strong message to the Taiwanese
government that it must reform its laws and policies – and its tuna industry must change – or it will face the consequences of inaction.

Flag State responsibility is a fundamental tenet of all legal regimes governing our ocean, including specifically on the high seas. Flag States must exercise their exclusive jurisdiction on the high seas to preserve marine biodiversity and protect vulnerable fishers. The US has the opportunity with the 2020 List of Goods to promote and protect fundamental human rights in international waters and hold rogue States and companies accountable for violations of international standards. To achieve this, flag State responsibility and accountability must be central to the message in your report.

We call on ILAB to demonstrate leadership on this issue, rectify past mistakes, and align with civil society, businesses, multilateral organizations, and other actors in the fight to eradicate forced labor and illegal fishing in the global fishing industry.

Sincerely,

Note some of the cases cited in the report have yet to be resolved through the judicial or administrative process. Greenpeace’s conclusions are based on methodology developed by the Indonesian migrant workers union Serikat Buruh Migran Indonesia (SBMI) and joint analysis by Greenpeace and SBMI. SBMI’s methodology is consistent with the methodology developed by Greenpeace for its own investigations.

ILO forced labor indicators were present among six migrant fishers who collectively worked on three Taiwanese-flagged fishing vessels. Two migrant fishers who each worked on Vanuatu-flagged, but Taiwanese-owned fishing vessels also reported forced labor indicators during interviews. The latter arrangement is a known scheme in the Taiwanese industry to avoid responsibility and limit accountability. Vanuatu has been declared by the International Transport Workers’ Federation as a Flag of Convenience. https://www.itfglobal.org/en/sector/seafarers/flags-of-convenience

The Reporter. 2017. Slavery at Sea (interviews in Indonesia and Taiwan documented the presence of ILO forced labor indicators among six Indonesian migrant fishers who worked on Vanuatu-flagged, but Taiwanese-owned longliner Tunago No. 61); The News Lens. 2018. Welcome to Taiwan: Beatings, Bodies Dumped at Sea and a Culture of Maritime Abuse (interview with an Indonesian migrant fisher who worked with Supriyanto onboard the Taiwanese-flagged fishing vessel Fu Tsz Chium corroborates Greenpeace and others’ reports that his fatal wounds resulted from continuous abuse by the skipper and engineering crew).

United Nations Convention on the Law of the Sea. 1982. Art. 92(1) (“Ships shall sail under the flag of one State only and, save in exceptional cases, expressly provided for in international treaties or in this Convention, shall be subject to its exclusive jurisdiction on the high seas”), Art. 94 (1) (“Every State shall effectively exercise its jurisdiction and control in administrative, technical and social matters over ships flying its flag”), Art. 94 (2) (“In particular every State shall: … (b) assume jurisdiction under its internal law over each ship flying its flag and its master, officers and crew in respect of administrative, technical and social matters concerning the ship”), Art. 94 (3) (“Every State shall take such measures for ships flying its flag as are necessary to ensure safety at sea with regard, inter alia, to … (b) the Manning of ships, labour conditions and the training of crews, taking into account the applicable international instruments”), Art. 94(5) (“In taking the measures called for in paragraphs 3 and 4 each State is required to conform to generally accepted international regulations, procedures and practices and to take any
steps which may be necessary to secure their observance”).
